

Solterra Landscape Chemical Applications

Spring and Summer Applications

These are the links to the labels and Safety Data Sheets (SDS) for all products that Schultz is planning to use within the turf grass areas and the rock beds at Solterra.

SpeedZone: Used for broadleaf weed control in turf grass areas. It treats difficult weeds like clover.

Trimec 1000: Used as a post emergent selective pesticide used to control broadleaf weeds in turf grass areas. Schultz switches to a 2,4-D and Dicamba blend later in the summer when the dandelions have been controlled, and we need to control thistle and clover. This product is only used in spot spraying.

22-0-6 Pro Pendi .75: This is a fertilizer blend containing Pendimethalin. Pendimethalin is a pre-emergent herbicide used to help suppress invasive grassy weeds like “crabgrass”

Please keep children and pets out of flagged areas

Defy Amine 2,4-D: This is a post emergent selective pesticide used to control broadleaf weeds in turf and native grass areas. Schultz uses this product by itself because of its low volatility and lessened environmental impact. This product is used May to July. This product is generally used once in a broadcast application and then followed up with spot applications.
